STA302H1 - Final Project Descriptive Statistics

Danny Chen

August 10, 2021

Import STA302H1 Study Time and COVID Contemplation Time vs. Quiz Performance Dataset

Data Cleaning

First, I'll clean my data.

```
cleaned_sta302_performance_data <- sta302_performance_data %>%
    # Create a new "country" column, which is just "Country" but whose entries are factors.
   mutate(country = as.factor(Country)) %>%
    # Remove the "X" column: it's simply the row number, which isn't very useful.
    # Remove the "Country" column: column "country" already exists
   select(-X, -Country) %>%
   # Rearrange similar columns side-by-side.
   relocate(country,
             COVID.hours..W1., COVID.hours..W2.,
             COVID.hours..W3., COVID.hours..W4.,
             STA302.hours..W1., STA302.hours..W2.,
             STA302.hours..W3., STA302.hours..W4.,
             Quiz_1_score, Quiz_2_score,
             Quiz_3_score, Quiz_4_score)
    # Identify rows with no quiz 4.
    # These indicate students who have dropped STA302H1, and who
    # should be excluded from the final data.
```

Rows With At Least One NA

Rows with at least one NA deserve closer examination.

Some of the rows might only have 1 - 2 NAs and are therefore salvageable, which is OK.

Other rows may contain 3 or more NAs, and might indicate students who have dropped STA302H1. We'd like to exclude them from our analysis.

```
at_least_one_NA = function(data) {
   return (rowSums(is.na(cleaned_sta302_performance_data)) >= 1)
}

rows_with_some_NAs = cleaned_sta302_performance_data[
   at_least_one_NA(cleaned_sta302_performance_data),
]
```

Rows with Mistyped Columns

Rows whose columns are mis-typed may need to be corrected via imputation.

```
rows_with_mistyped_columms = cleaned_sta302_performance_data[c(38, 83, 84, 117),]
# row 83: Country -> "canada" -- DONE
# row 84: Country -> "canada" -- DONE

# row 117: COVID.hours..W4. -> 0.5 hours -- DONE

# row 38: STA302.hours..W3. -> 5.5<U+00A0> -- DONE
# row 117: STA302.hours..W4. -> 7.5 hours -- DONE

# library(janitor)
# use it to clean up data.
```

Rows Without Country Entry

Taking out the country column can come in handy for functions like cor() where factors aren't allowed.

```
# TODO: You could also create separate correlation matrices for each country.
no_country = cleaned_sta302_performance_data %>%
select(-country)
```

Find Significance Predictor Variables, Select Predictor Variables Based on Criterion

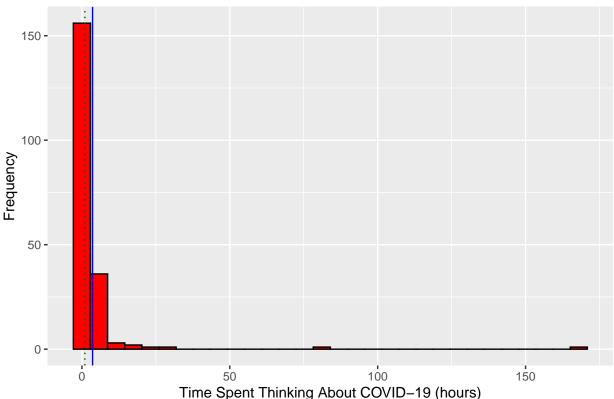

```
# use week 5b slides -- choose model selection criterion to pick predictor variables.

# use lm() on a bunch of predictor variables to determine significant
# predictor variables.
```

Histograms

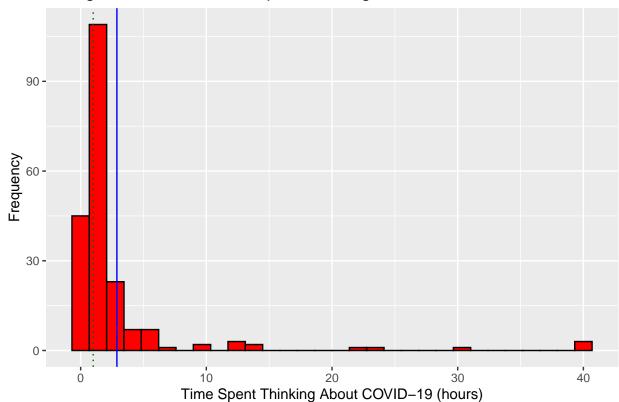

Warning: Removed 26 rows containing non-finite values (stat_bin).

Histogram of Week 1 Time Spent Thinking About COVID-19

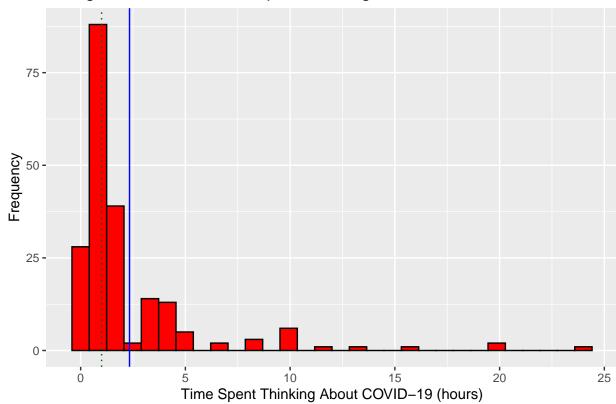

Warning: Removed 22 rows containing non-finite values (stat_bin).
